Dear Chairs Cochran and Blunt and Ranking Members Leahy and Murray:

As members of One Voice Against Cancer (OVAC), a coalition of public interest groups representing millions of cancer researchers, patients, survivors and their families, we are writing to commend you for providing relief from sequestration with the passage of the Bipartisan Budget Act of 2018. We now urge you to provide the highest possible 302(b) allocation to the Labor, Health and Human Services Appropriations Subcommittee.

Thanks to your leadership, significant progress has been made to reduce the loss of purchasing power experienced by the National Institutes of Health (NIH) and the National Cancer Institute (NCI) since FY 2003, the end of the five-year doubling of NIH. But much more must be done. For FY 2018, OVAC requested a $2.144 billion increase for NIH – $2 billion plus the $144 million increase in 21st Century Cures Act funding for NIH that Congress has already committed to provide this fiscal year. Now that Congress has raised the FY 2018 nondefense discretionary budget cap, we urge you to build on your extraordinary support for biomedical research by providing at least $2.144 billion more for NIH, including at least a proportional, $319 million increase for NCI. (This increase should be in addition to any new NIH funding specifically set aside for research on opioid abuse and other initiatives.) Even with an increase of $2.144 billion, NIH funding would still be $5.5 billion, or 13 percent, less than it would have been this fiscal year if funding had simply kept up with biomedical inflation since FY 2003.

While NIH funding has risen in recent years, funding for cancer prevention and control programs at the Centers for Disease Control and Prevention (CDC) has lagged behind. In fact, between FY 2010 and FY 2017, funding for these programs fell by $14 million, from $370 million to $356 million. Adjusted for inflation, the purchasing power for CDC’s cancer programs dropped by 11 percent over those seven years. Congress has a rare opportunity to reverse this trend and invest in CDC’s...
evidence-based cancer prevention and control programs, which are saving lives in communities across the country. We urge you to provide an increase of $184 million, for a total of $514 million, for these vital activities.

The members of OVAC thank you for your consideration of this request and stand ready to support your efforts to promote cancer research and prevention funding.

Sincerely,
