Hair and nail disorders are among 24 skin diseases or disease categories examined in the Burden of Skin Disease report commissioned by the American Academy of Dermatology. The report examined prevalence, economic burdens, and mortality for skin disease in the U.S. using 2013 health care claims data drawn from insurance enrollment and claims databases and found that:

- **84.5 million Americans — one in four** — saw a physician for skin disease; 50% of them are over 65 and have an average of 2.2 skin conditions.
- Skin disease **cost the U.S. healthcare system $75 billion** in medical, preventative, and prescription and non-prescription drug costs.
- **One in three Americans were seen by dermatologists**, who collaborate with other physicians throughout the health care system in caring for these patients.

In 2013, nearly 8 million Americans sought medical treatment for hair and nail disorders, a group of conditions that includes alopecia, telogen effluvium, hirsutism, and hair and nail anomalies. These conditions:

- Primarily affected adults, especially **seniors over age 65**.
- Resulted in **$986 million in medical costs**.
- Led to **lost productivity costs of $385 million**, similar to nonmelanoma skin cancer or acne.

The charts that follow provide topline data on how hair and nail disorders contribute to the overall burden of skin disease.

The full report includes data on prescription and non-prescription drug costs, and how age and insurance status and provider relate to the burden associated with hair and nail disorders and skin disease broadly. To purchase the report visit www.aad.org/BSD.
