CLINICAL PEARLS

Session Title and Number:
S011: Clinicopathologic Self-assessment

Presenter Name:
Nicole Burkemper, M.D.

Clinical Pearls:

Limited forms of Wegener’s granulomatosis including protracted superficial Wegener’s granulomatosis (granulomatosis with polyangiitis) can present with superficial granulomatous pyoderma (AKA vegetative pyoderma gangrenosum).

Once weekly exenatide, FDA-approved for type 2 diabetes, can cause subcutaneous nodules that histologically represent eosinophilic sclerosing lipogranuloma.
